EDUCATION

Indian Institute of Information Technology, Nagpur (IIITN)

Bachelor of Technology (B.Tech) in Computer Science and Engineering

Oct 2022 - Jun 2026

Shreeram Model High School, Faridabad, Haryana

XII (CBSE) | 94.2% | 2022

SKILLS

Languages: C++, Python, C, JavaScript, SQL

Backend: FastAPI, Node.js, Express.js, REST APIs, Design Patterns

Frontend: React, HTML, CSS, Tailwind CSS

Databases: OracleDB, MySQL, MongoDB

Cloud & Tools: AWS S3, Git, GitHub, Postman, Vercel, Render

Libraries: Pandas, Redux

Soft Skills: Problem solving, Communication, Attention to detail, Teamwork

EXPERIENCE

Software Developer Intern

Sep 2025 – Present

KFin Technologies Limited

Hyderabad, Telangana, India

- Developed asynchronous RESTful APIs using Python and FastAPI for concurrent, non-blocking operations, implementing JWT authentication and automated testing for portfolio, transaction, and reporting workflows.
- Built a centralized SQL query loader to preload queries at startup, eliminating redundant API reloads and reducing response time by 30 ms while reducing memory usage under high traffic.
- Integrated AWS S3 with FastAPI for secure invoice storage and retrieval using presigned URLs, supporting 6,000+ invoices per quarter, with each report containing 500K–600K rows.
- Designed OracleDB schemas and wrote complex SQL queries for high-volume backend APIs, enabling efficient retrieval and processing of large-scale financial data.
- Implemented pagination for high-volume family and invoice APIs, controlling response payload size and database load while efficiently serving large result sets.
- Engineered high-volume report generation pipeline processing 500K–600K rows per report from large relational datasets, enabling Excel report generation within minutes.

PROJECTS

ByteBlog | HTML, CSS, JavaScript, React, Tailwind CSS, Redux, Appwrite, Node.js

- Built a fully featured blogging platform using React for a dynamic and responsive user interface, enhancing user experience across devices.
- Users can sign up or log in, view blogs in "My Feed" section, upload their own blogs, edit or delete previously uploaded blogs, manage account details with ease.
- Integrated Redux Toolkit for scalable state management and React Router for efficient navigation, reducing page transition latency by 20%.

CampusPilot | React, JavaScript, RESTful APIs, Tailwind CSS, Express.js, MySQL, Node.js

- Created CampusPilot, a scalable full-stack College Management System supporting 3 user roles (student, faculty and admin), improving operational efficiency across departments by 25%.
- Designed and deployed dynamic modules including real-time notice tickers, auto-rotating image carousels, interactive admission forms, and role-specific dashboards, enhancing user satisfaction.
- Engineered a secure RESTful backend with Express.js and MySQL, managing 1000+ records efficiently.

Airline Ticket Booking System | C++, Object Oriented Programming, File Handling

- Programmed an Airline Ticket Booking System in C++ using OOP principles such as classes, inheritance, polymorphism, and encapsulation, reducing code redundancy by 20% and improving maintainability.
- Developed a robust file-handling mechanism to manage user credentials, flight details, and booking records, ensuring persistent storage, quick retrieval, and real-time ticket availability updates for over 1,000 records.
- Enforced core functionalities such as user authentication, flight searching, booking with seat validation, cancellation with a 60% refund policy, and admin controls for flight management.

ACHIEVEMENTS

- Achieved a peak **LeetCode** rating of 1691, ranking in the top 13% globally.
- Solved more than 600 questions based on Data Structures and Algorithms.
